General Notes

1. The design features a sealed skylight with a sloped roof and pitched walls, designed to complement the architectural style of the building.

2. The skylight system includes a sealed guttering system and flashing, with high-quality materials to ensure durability and weather resistance.

3. The system is designed to be installed with minimal disruption to the existing structure, ensuring a seamless integration.

4. The skylight is equipped with high-performance glazing to provide optimal light transmission while maintaining energy efficiency.

5. The design includes an integral rainwater harvesting system, promoting sustainability and water conservation.

6. The skylight is fabricated from high-quality, low-emissivity glass, enhancing energy efficiency and reducing heat gain.

7. The system is designed to comply with all relevant building codes and regulations, ensuring safety and quality.

8. The skylight is installed using a combination of mechanical and adhesive bonding methods, ensuring a secure and durable installation.
